

Alzhiemers Disease

Alzheimer's disease is a brain disorder that generally occurs later in life. Individuals with Alzheimer's disease develop progressive loss of memory and gradually lose the ability to function and to take care of themselves

Possible Causes and Contributing Factors:

- Heavy metals
- Vitamin B-12, Folic Acid and/or B1 deficiency
- Immune dysfunction
- Zinc deficiency
- Reduced blood supply to the brain (carotid artery blockage, low blood pressure, cardiac insufficiency, etc.)
- Exposure to industrial chemicals, pesticides, etc.
- Free radicals

Suggested Dietary Changes:

- Experiment by eliminating gluten and dairy for a few weeks
- Avoid exposure to automobile and industrial fumes, tobacco smoke, aluminum cooking utensils, under arm deodorant and cosmetics
- Use only pure water for cooking and drinking
