

# Attention Deficit Disorder (ADD)

Attention deficit–hyperactivity disorder (ADD or ADHD) is defined as age inappropriate impulsiveness, lack of concentration, and sometimes excessive physical activity. ADD has been associated with learning difficulties and lack of social skills. The main neuroleptic (mind altering) prescription drug treatment for ADD, Ritalin (methylphenidate), is similar to amphetamine drugs.

## **Possible Causes and Contributing Factors:**

- Birth trauma
- Heavy metal body burden
- Intestinal parasites
- Malnutrition
- Iron, B6, or magnesium deficiency
- Food/environmental sensitivities (dairy #1)
- Carbohydrate sensitivity with resulting dysinsulinism
- Brain virus
- Endocrine hypo or hyper-function
