

Epilepsy

A group of nervous system disorders which are marked by repeated episodes of convulsive seizures, blackouts and sensory disorders. Epilepsy is a health issue characterized by seizures, which is caused by electrical impulses that tend to build up and suddenly discharge, leaving the surrounding cells overwhelmed. There are two main types of seizures. The first is a sensory seizure, which is the milder of the two. It tends to manifest itself as a minor loss of consciousness. This form of a seizure is also known as petit mal. The second type of seizure is known as a severe convulsion, which manifests itself with abnormal muscular behavior, strong & uncontrollable spasms. This type of seizure is known as grand mal.

Possible Causes and Contributing Factors:

- Metal body burdens (aluminum, mercury, lead, cadmium, copper are most common)
- Intestinal parasites
- Food sensitivity (dairy, gluten, night shades most common)
- Reactive hypoglycemia
- Manganese, magnesium or B6 deficiency
